COPY EXCERPT

Aerospace test engineers and managers:

Discover a way to triple the life of your avionic test system... at no added cost.

FREE white paper shows how to keep test systems qualified for 30 years or more.

Call or email CopyEngineer to receive a PDF of the complete landing page.

Computer technology lasts about ten years. Aircraft technology lasts thirty years or more.

That's often a problem for aerospace test and maintenance organizations.

Their computer-based avionic test systems become obsolete long before their aircraft does. But the cost of replacing data bus interface cards, re-writing test scripts and re-qualifying their test system is often prohibitive.

That's why you'll want to read our latest FREE white paper: ***A Way to Triple the Lifetime of Avionic Testing Systems***. In it you'll discover:

- ✓ How a new class of bus interface solutions can extend avionics test system life an additional 20 years or more
- ✓ How employing this new technology reduces costs when computers in the test system must be replaced
- ✓ How you can upgrade your test systems computer technology without rewriting your test scripts.
- ✓ How multiple users can simultaneously control and monitor avionics bus data from their normal work stations
- ✓ What to look for when choosing one of these next-generation bus interface solutions

and much more...

Just fill out the brief form below and click "Request FREE White Paper" to receive your FREE copy by email.
